Nourishing Soil | for Healthy Crops

HUMIFFCO

HUMIFFCO is a natural biostimulant which contains humic and fulvic acid in right proportion for maintaining fertile soil for healthy crops. It organically chelates the soil nutrients and makes them readily available to crops. When applied to soil it physically modifies the soil structure, chemically changes soil fixation properties and biologically stimulates the plant growth and soil microbial activity. It improves the soil structure; increases water retention capacity, seed germination, root growth and quality of crop yields.

BENEFITS

Activates plant growth

Stimulates soil microbial population

Balances soil salinity & alkalinity

Improves soil surface activity & buffering capacity

Improves permeability of cell membrane for entry of nutrients.

Enhances nutrient absorption and soil water retention

HUMIFFCO LIQUID

COMPOSITION: • Humic Acid 5.0-5.5% • Fulvic Acid 0.5-1.0% • Potassium (K_2O) 0.5-1.0%

SIZE	MRP
1L	₹ 500
500 ml	₹ 270

Mode of Application	Dosage	Application Description
Drenching	500 ml/acre	Establishment stage
Foliar Spray	5ml/L of water (400-500 ml/acre)	Pre-flowering (Recommended to be applied along with Nano DAP)
Drip Fertigation	1000 ml/acre	Once in a month

This is compatible with most of the fertilizers and pesticides
